JONIEC® Company was founded 28 years ago. The Company's leading motto: "We set new boundaries" motivates us to keep improving our services and the quality of our products constantly. We observe changing trends and likes to be able to offer products that fit into the current trends in architecture. We do our best to make each client feel that he is important to us; that at every stage of cooperation he can rely on our help and support.

"We set new boundaries" is the device that sets us directions to different activity fields; not just in every day Company's life but also in supporting activities of interesting and important public projects. We help the local community, we support charity events, we sponsor young talented sportsmen. We promote the idea that everyone of us can overcome barriers and difficulties – setting one's own new boundaries.

Split fence GORC® is JONIEC® Company's original idea. Special split surface and clean-cut horizontal and vertical joints of split blocks create unique charm to posts and foundations. The GORC® fence system is an elegant and impressive showcase of the house. The product has been awarded 3 times with the Certificate Quality of the Year and HOME ZONE Certificate Quality and Reliability.

Fence system GORC® Top will be appreciated by people who value classics and naturalness. SCRATCH technology gives exceptional softness to the blocks' surface. Gentle blends of colours make the fence the visual completion of the building's surroundings and not its central point. Thanks to the characteristic structure of the post and foundation blocks the fence is very stable and durable. GORC® Top system is an ideal solution for building high fences and walls.

RIO slope blocks are a perfect solution where you need to strengthen scarps, banks or hillsides. Trapeze shaped blocks with a split facing can be arranged in a number of construction lines: straight, round or wavy. They can also be used in garden architecture as an ornamental element to build blooming sides, flowerbeds, flowerbed or lawn edging.

FOUNDATIONS

FOUNDATION
GREY

Using prefabricated concrete boards to build a fence is a perfect way to significant reduction of time and cost of the construction. Concrete boards have sizes that are compatible with the most of metal, wood fence panels available on the market. The concrete boards can also be used to build metal net fence.

SPLIT BRICK

SPLIT BRICK
ONYX

Split brick is a material that can be used to build aesthetic garden pavements and pavements around the houses and garages. It's a product that can be used to build stairs of a terrace, small lanes and sites. Palette of tones enables to match the colour of the fence, elevation or other elements of premises. Palette of colours consists of unicolours (sand, black) as well as blends MULTICOLOR® (pyrite, onyx, vera, bronzite, goethite). Various colours of brick enable to create unique visual compositions. The space can be arranged with brick of the same size to create classic calm look or you can mix brick of various sizes to create an exceptional unique effect.

SPLIT PAVEMENT

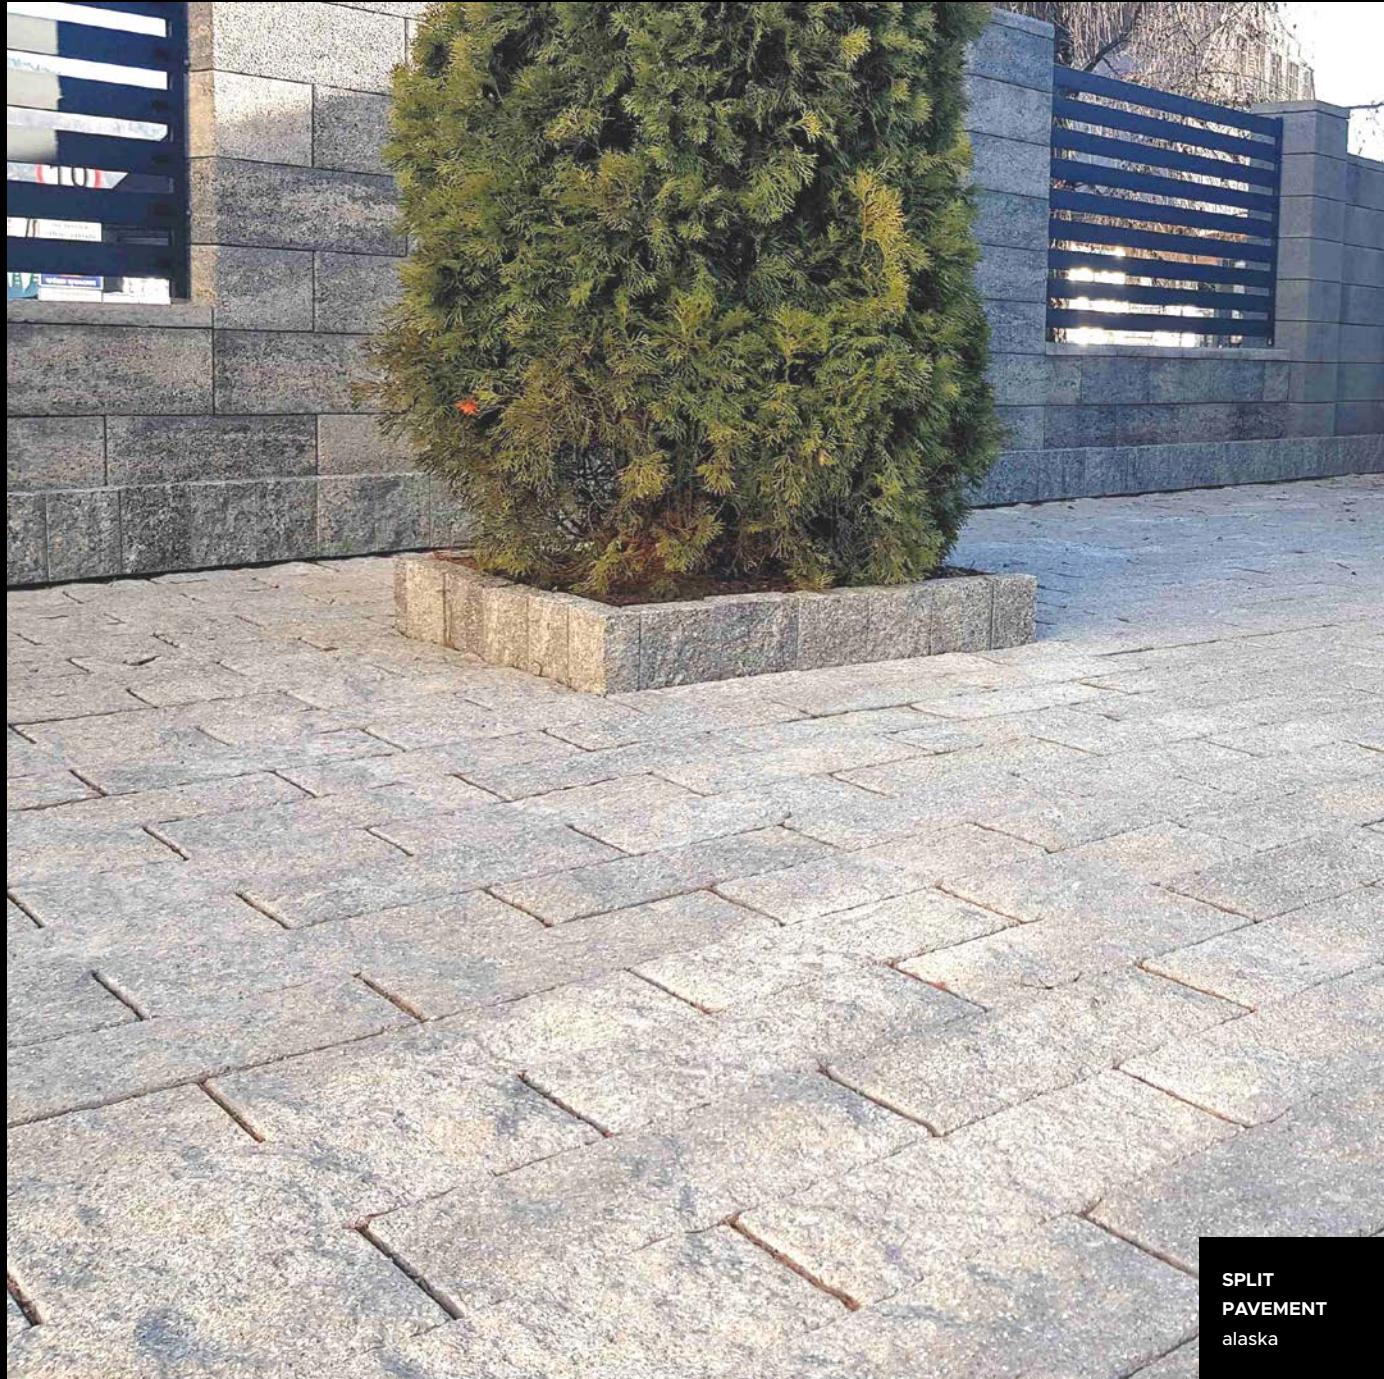

ALASKA

SPLIT
PAVEMENT

SPLIT
PAVEMENT
alaska

Split pavement is a great alternative to traditional cobblestones. Non-standard tile sizes make garden paths, pavements or small garden squares built out of them obtain an original look. The material from which the split pavement tiles are made is concrete colored in mass, which means that the color does not wipe over time, and the whole retains its original aesthetics even with slight damage.

GABION SEGMENTS

LETTER BOXES

FENCE PANELS

PANEL
Lucca

PANEL SEGMENT

Panel segments are a quick way to build a modern looking fence. They can be fitted in two ways: as a palisade (parallel to the surface of the post) or as a blind (angled). The spacing between individual panels can be adjusted to achieve more or less visibility of the fence. The steel elements are made of galvanized sheet, powder coated.

GABION SEGMENTS

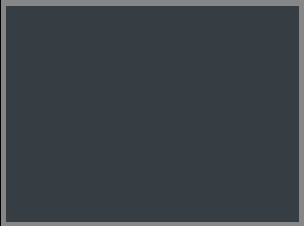

Gabion segments are the product thanks to which the fence will gain a unique look. The spacing of the segments can be fully filled up (to get full cover) or partially (to get partial visibility of the fence). You can use various materials for filling such as natural stone, glass, etc.

LETTER BOXES

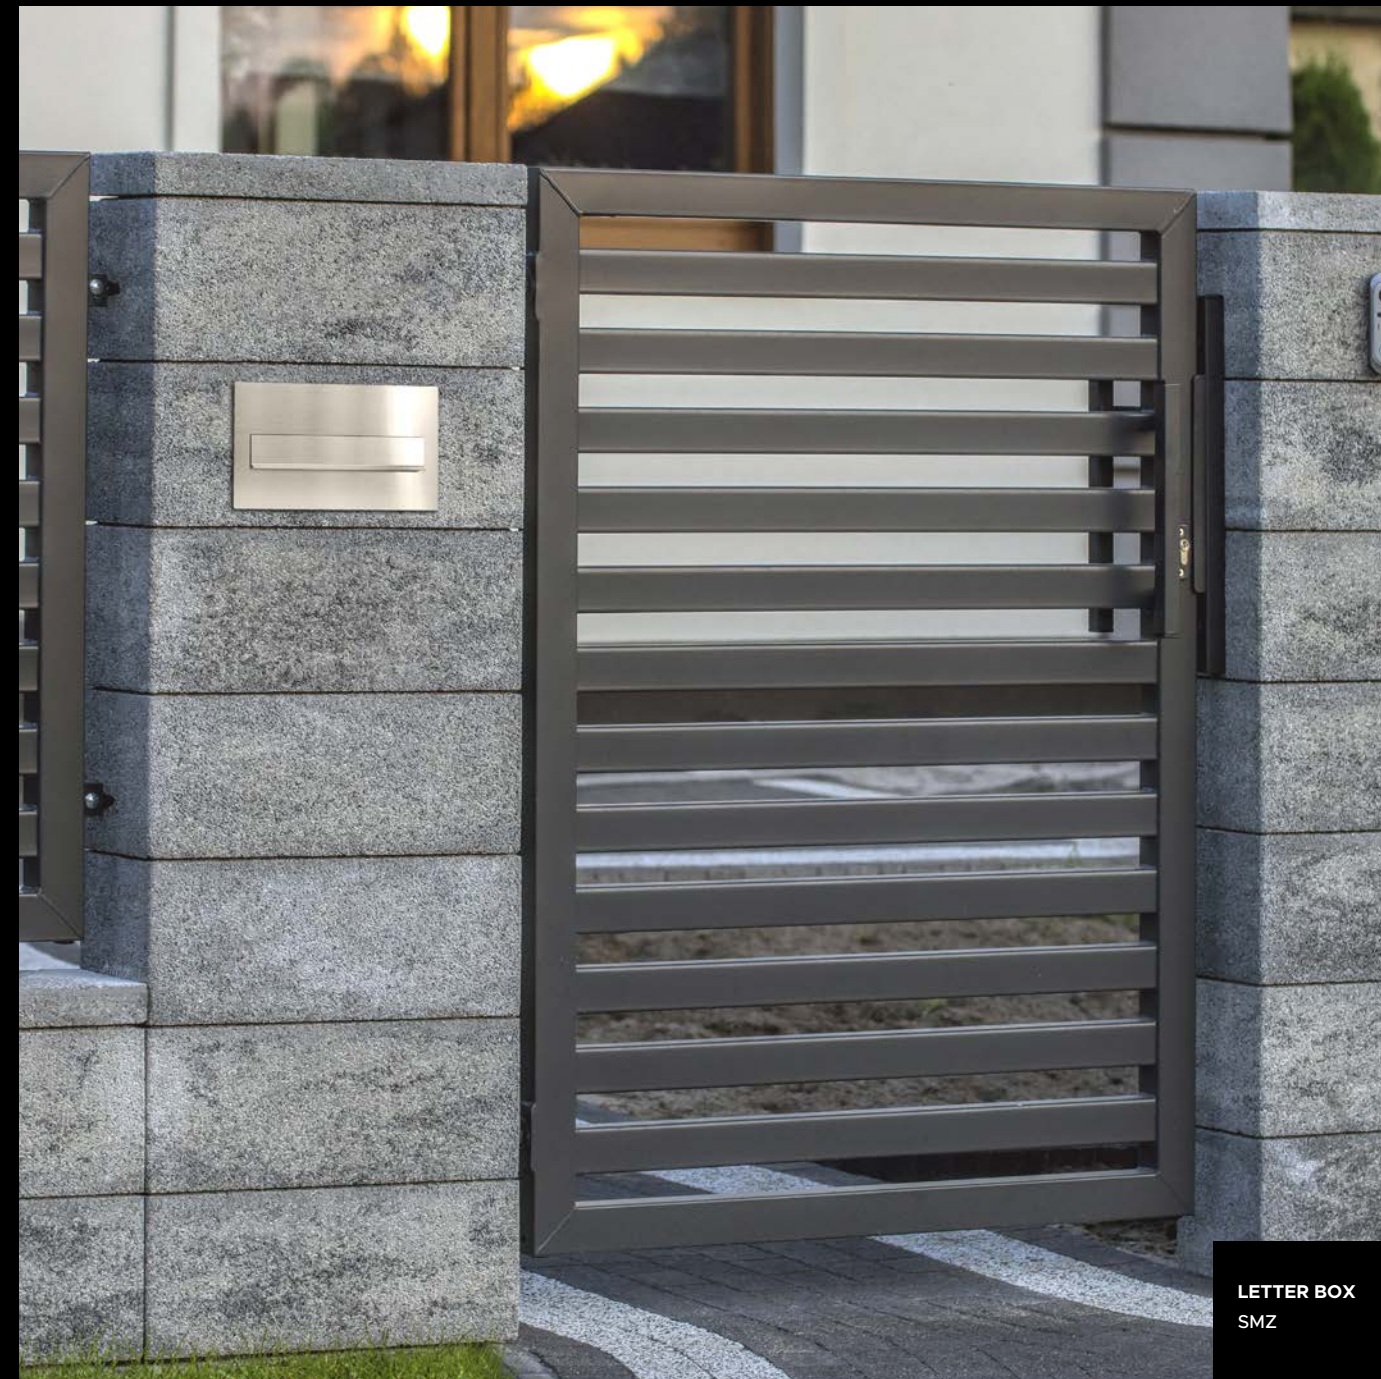

LETTER BOX
SMDA

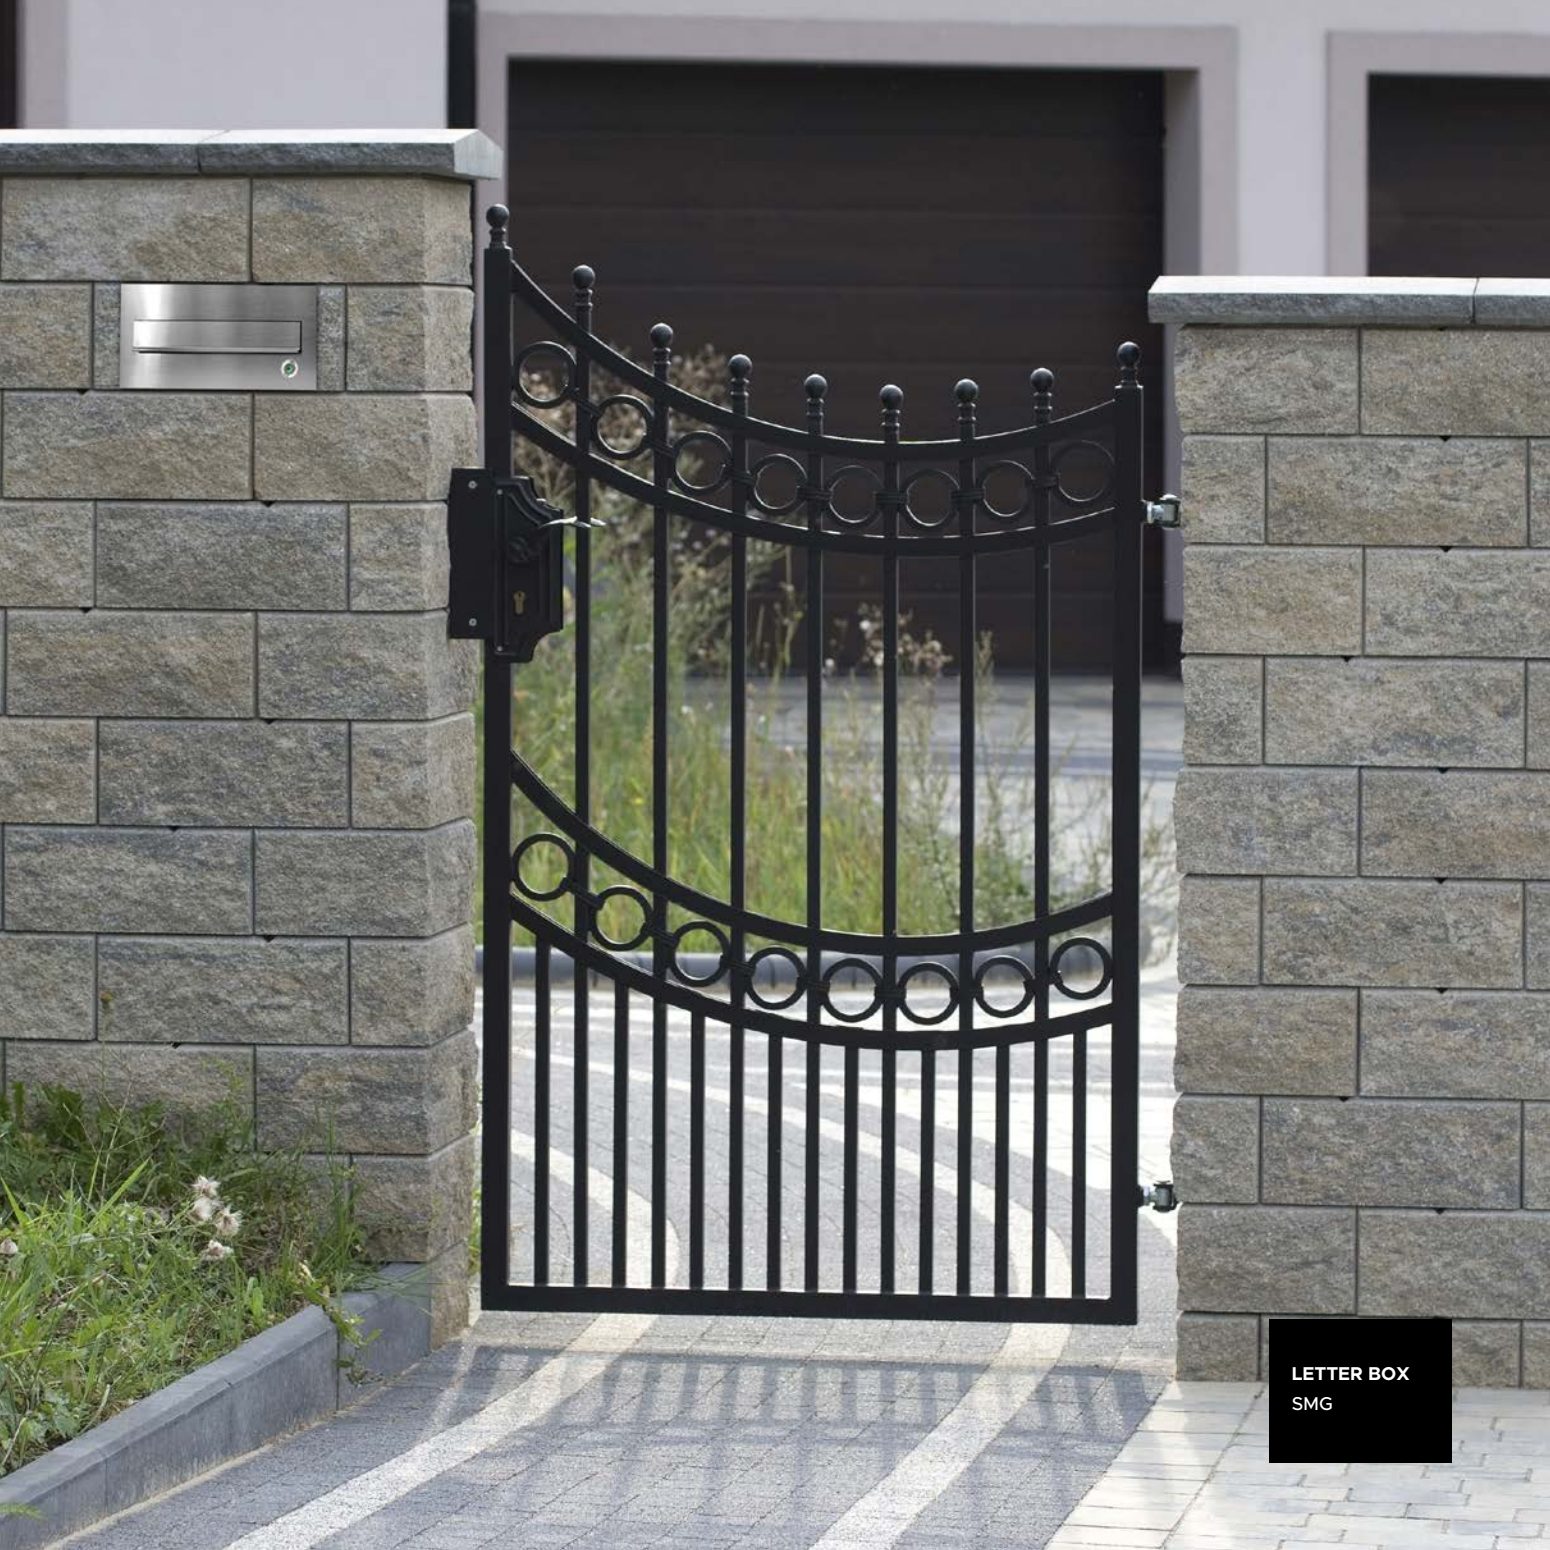

LETTER BOX
SDDA

The letter boxes are made of non-corrosive brushed steel and are the product for years to last. Built-in letter boxes give a unique aesthetic effect – on the fence we can only see a small elegant panel. The letter boxes are through which gives an easy access to correspondence from the side of the house. Additional facility can be fitted such as a bell or intercom. Range of colours enables to match every fence.

CONCRETE CHEMICALS

IMPREGNANT

Impregnant is used for concrete and stone surfaces. The preparation protects the elements from absorption of fouling and makes it more resistant to atmospheric conditions, it improves the look of the surface, enhances its colour and reduces abrasiveness. With limestone, sandstone or other natural stones it is recommended to make a test first.

SEALING GLUE

Sealing glue for fence and stone blocks, precast elements. A binder for glueing and sealing fence and stone blocks as well as precast elements. Strong, one-component adhesive polyurethane glue/sealant. Very good adhesion to concrete brick, metal and many other substrates.

PAINT

Paint for painting and renovating concrete surfaces, of a very good resistance to atmospheric conditions and abrasiveness and great adhesion to concrete surfaces. It is based on modern raw materials that guarantee the highest quality. We recommend the paint for refreshing the colour of the caps that may fade away over time.

PREPERATION FOR REMOVAL OF EFFLORESCENCE

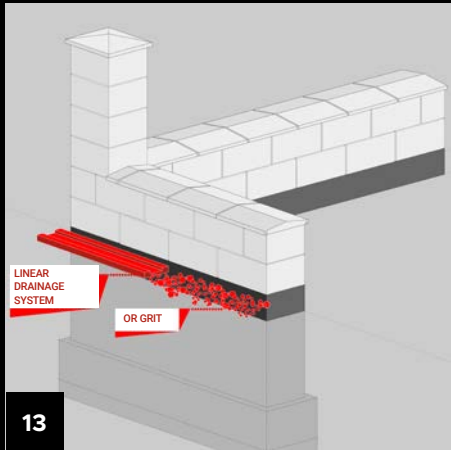

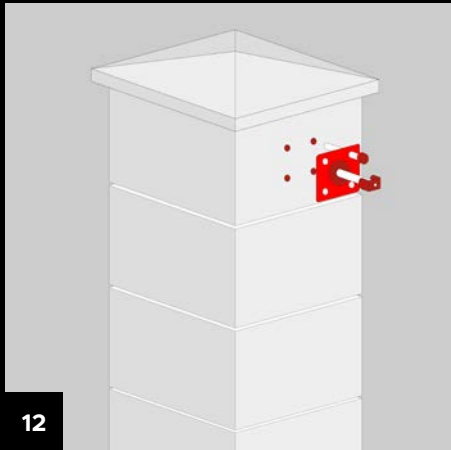

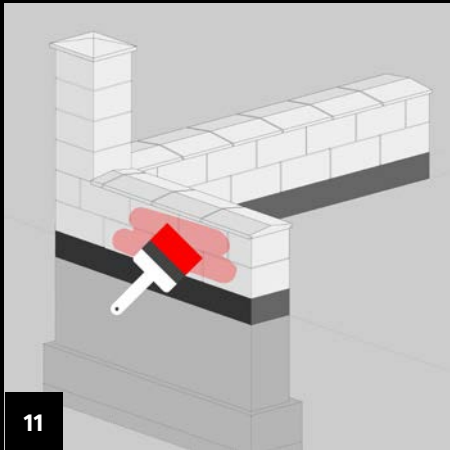

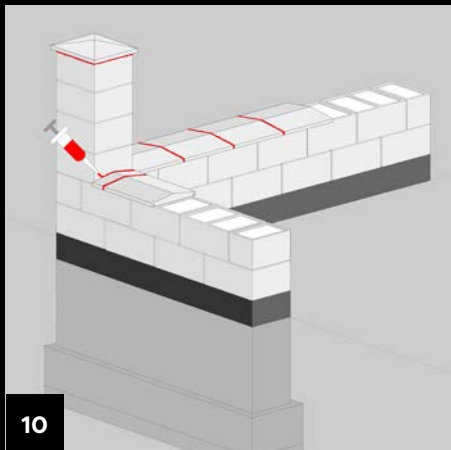

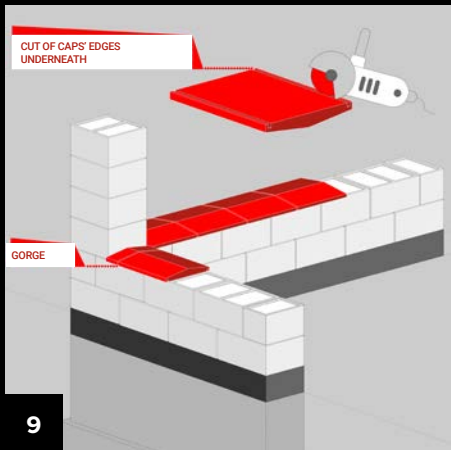

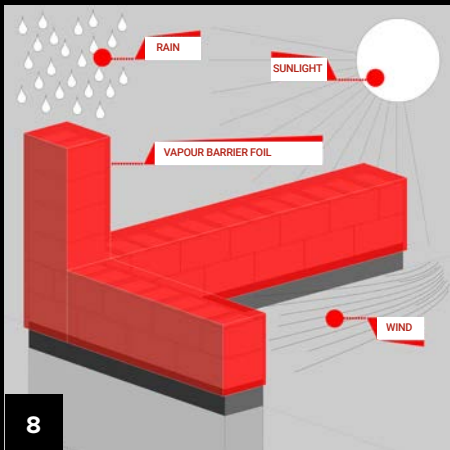

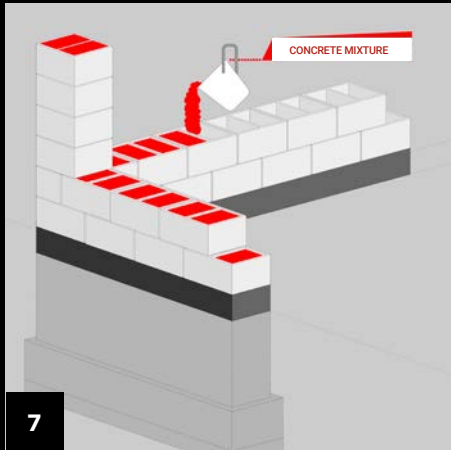

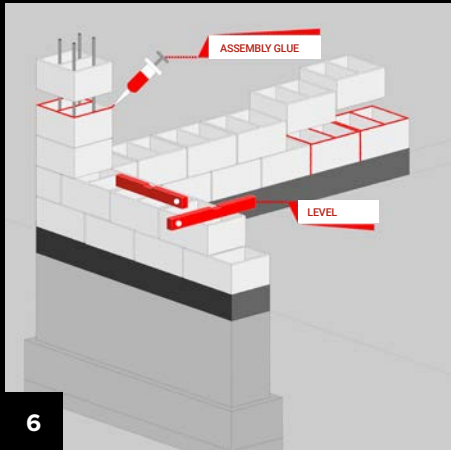

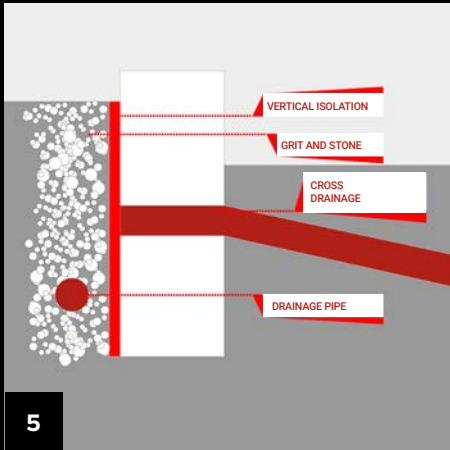

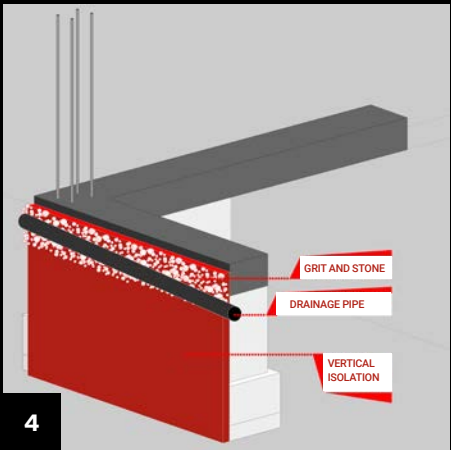

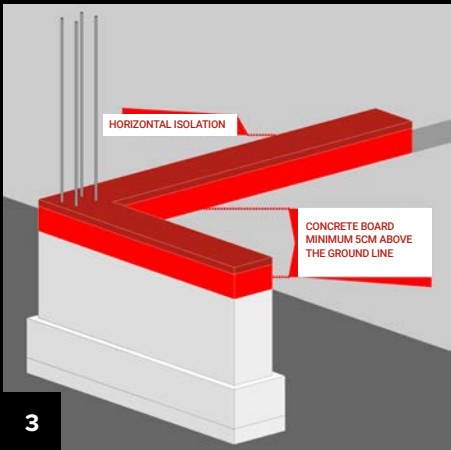

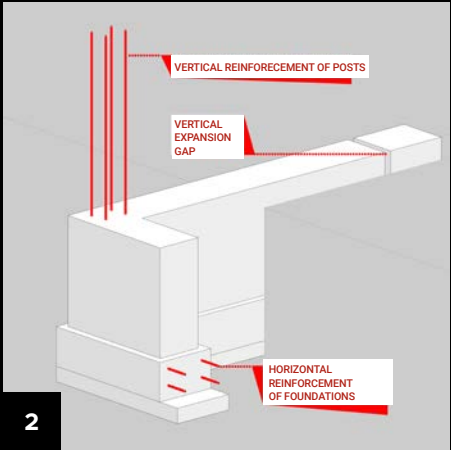

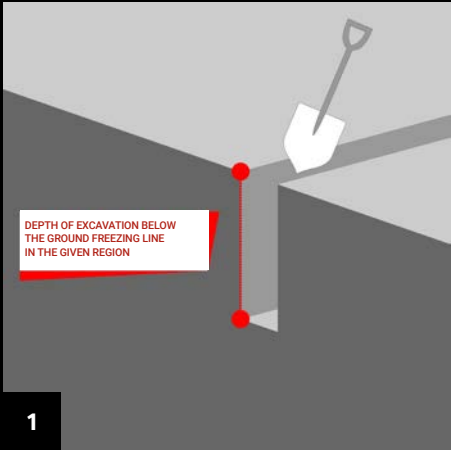

Professional preparation intended for effective removal of carbonate efflorescence – white stains and infiltration stains appearing on concrete products such as fence blocks, wall elevation, scarp elements and planters. Recommended for cleaning the surfaces before impregnation or painting.

PLASTICIZER FOR CONCRETE LBN

Plasticizer LBN is a preparation that we add to concrete mixture made on the site of construction. LBN gives the mixture plasticity which fills in concrete blocks of the fence accurately. Accurate filling the inside of the blocks is the guarantee that the concrete core will be durable and it will prevent the posts and foundations from cracking.

FENCE ASSEMBLY MANUAL

1. Excavation for foundation
2. Foundation and reinforcement
3. Hydroisolation
4. Drainage system – flat terrain
5. Drainage system – sloping ground
6. Blocks arrangement and glueing
7. Pouring concrete into the blocks
8. Concrete care
9. Caps fitting
10. Sealing with the JONIEC binder
11. Impregnation
12. Front gate and wicket gate fitting
13. Protection from fouling
